profile

Mission Statement:

In an era where images can empower and enlighten with greater speed and impact than ever before, art and design can take on new and unexpected forms. My work is an exploration of the systems of meaning that underly visual expression. I build tools and experiences that harness the power of machines while affirming people's ability to empathize and connect, create rather than destroy.

Goal:

Currently seeking part-time employment (5-10 hrs a week) in a creative capacity. Especially interested in applying skills relevant to graphic design and the arts. Challenges and skill-building opportunities appreciated.
